SUMMARY OF QUALIFICATION

Software Engineer with backend development experience across banking and financial systems, specializing in Go, legacy system modernization, and automated batch processing. Experienced in building backend scheduler services, optimizing SQL Server data workflows, and developing REST APIs for system integration. Focused on delivering maintainable architectures and reliable automated file-processing workflows for production environments.

SKILL / QUALIFICATION

- **Backend:** Golang (Fiber, GORM, gocron), REST API, Microservices, Clean Architecture, Python, PHP (Laravel), Node.js (Express), Java (Spring Boot)
- **Frontend:** React.js, JavaScript, TypeScript, HTML, CSS, Bootstrap
- **Database:** SQL Server (Stored Procedures, Dynamic SQL, Query Optimization, Bulk Insert), PostgreSQL, MySQL, MongoDB, ETL/Batch Processing
- **DevOps:** Docker (Multi-stage Builds), Kubernetes (Helm Configuration), Bamboo CI/CD, Elastic APM
- **Automation & Data Migration:** Python (Scheduler Development), ETL Migration (SSIS to Golang)
- **Integration & Security:** FTP/SFTP, MinIO Object Storage, File Parsing, AES/GPG Encryption Automation
- **Tools:** Git, Bitbucket, Azure Data Studio
- **OS & Infra:** Linux, Apache, XAMPP
- **Others:** AS400 (Core Banking), IT Support

EMPLOYMENT HISTORY

BRI (Under Vendor) | 13 OCT 2025 – Present

Back End Engineer

Description :

- Developed and maintained scheduler services using Golang to automate internal banking processes.
- Designed and implemented multiple modular scheduler applications, including:
  - sch-log-activity-briva – centralized scheduler for logging and monitoring BRIVA processing activities.
  - sch-param-ftp-briva – scheduler for managing and distributing FTP configuration parameters.
  - sch-data-update-briva – scheduler for updating and synchronizing BRIVA-related data.
- Implemented scheduler integration architecture, where sch-log-activity-briva acts as a central logging and tracking service for multiple schedulers, including:
  - sch-data-copy-briva
  - sch-param-ftp-briva
  - sch-get-ddhist-briva
  - sch-data-update-briva
  - sch-sp-executor-briva
  - sch-generate-file-briva
  - sch-get-data-flow-briva
- Integrated schedulers with SQL Server to execute data processing logic and stored procedures.
- Implemented MinIO object storage integration for storing generated files and processing outputs.
- Developed a centralized REST API using Fiber to track and monitor job execution statuses across multiple scheduler services.
- Automated file distribution and processing workflows, integrating FTP/SFTP remote servers with MinIO for parameter file synchronization and retention.
- Containerized scheduler services using Docker with multi-stage builds and deployed them to Kubernetes environments using Helm charts.

- Implemented CI/CD pipelines using Bamboo and managed source code using Bitbucket.
- Performed monitoring, troubleshooting, and production issue handling to ensure scheduler reliability and data accuracy.
- Collaborated with DevOps and business teams to ensure secure, scalable, and auditable batch processing systems.
- Built a Python-based scheduler for encrypting and decrypting ATM settlement and client files using AES and GPG, handling multi-threaded processing across multiple client submodules with reliable error handling and retry logic to guarantee file integrity on failed transfers.
- Built the sch-parse-file-merah-putih Go service from scratch to replace 3 legacy SSIS DTSX packages (JalinMerahPutih: CreateDatabase, GetAndUnzip, Parse), using Clean Architecture and preserving 100% of existing business logic while transitioning to containerized processing and MinIO object storage.
- Authored SOP documentation for required SQL queries (insert, update, select) across various business conditions, complete with nota dinas (official memo) attachments to ensure audit and compliance traceability.

Hitachi Channel Solution | 2024 – SEP 2025

Software Engineer

Description :

- Development of IMHOTS Application and EJ Dashboard for Web-Based Asset Management: Actively involved in the development of the IMHOTS application and EJ Dashboard for ATM monitoring across various banks. The application was built using Laravel and MySQL database. My responsibilities included bug fixing, implementing customer requests, and optimizing application performance to meet customer needs and preferences.
- Creation of Miniscripts and Supporting Tools: Developed various miniscripts and tools to convert Excel files into SQL format for easier data input into the database, as well as creating other miniscripts to enhance operational efficiency
- Server Setup for Clients: Responsible for setting up servers for each client, both through manual Apache configuration and using XAMPP. Additionally, I performed configuration and installation of other dependencies such as MySQL and SQL Server databases as required.
- Database Optimization with Indexing and Temporary Tables: Achieved breakthroughs in application performance optimization by implementing indexing and the use of temporary tables in the database to significantly speed up data processing.
- Improvement of Data Processing with Bulk Insert: Successfully created a miniscript that allows for bulk insert by reading file paths, speeding up the data input process. Additionally, I implemented an auto-start service feature so that, even after a server restart, the necessary services would automatically restart once the server is back online.

OCBC NISP | 2022 – FEB 2024

Software Engineer

Description :

- developed the ProrRekonATM desktop application, which is an internal application for reconciling billing data between the company and the biller. This application is a procedural one that uses more storage procedures.
- sometimes compare data by checking as400 (core banking) and doing physical ATM testing.
- Designed and re-coded the prorekonATM application into a website, using ReactJS and API integration with Axios.
- create API with golang and postgresql database

KNusantara Group | April 2023 – December 2023

Back-end & Analis

Description :

- create an API using the PHP programming language with the Laravel framework, with integration using MySQL
- carry out analysis before creating the required application

BRI Life | 2020 – 2022

Back-end

Description :

- developing a back-end system using nodeJS and the express framework, adding and adjusting the output data according to business processes so that it can be used by the front-end, using SQL server and azure data studio for the data model

Bootcamp Code Academy | 2019

Software Engineer

Description :

- learn programming where the backend uses the Java programming language and spring boot framework, and for the front end uses the JavaScript programming language with the React-JS framework

IT Freelance | Jan 2019 – Present

Description :

- fix on device for simple, OS installation, and selling second hand laptop

EDUCATION

- Major of Office Administration (2014-2017), SMKN 42 Jakarta
- Bachelor in information Systems (2018-2022), Mercu Buana university (GPA 3.71)

PERSONAL SKILL

- Quick Learning
- Good written and verbal communication
- Highly organized and efficient
- Ability to work independently or as part of a team
- Proven leadership skills and ability to motivate
- Public Speaking
