SUMMARY OF QUALIFICATION

Software Engineer with 6+ years of experience developing reliable applications, automating workflows, and optimizing database performance across banking and enterprise environments. Proven track record delivering software solutions across diverse tech stacks (Golang, PHP Laravel, Node.js, React.js, and Python). Adaptable across the full engineering lifecycle—from system architecture and API integration to database design, query tuning, and production support.

SKILL / QUALIFICATION

- **Backend:** Golang (Fiber, Clean Architecture, gocron), PHP (Laravel), Node.js (Express), Python, Java (Spring Boot), RESTful APIs, Microservices
- **Frontend:** React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, Axios (API Integration)
- **Database:** SQL Server (Stored Procedures, Query Optimization, Bulk Insert, Dynamic SQL), PostgreSQL, MySQL, ETL & Batch Processing
- **DevOps & Cloud:** Docker (Multi-stage Builds), Kubernetes (Helm), Bamboo CI/CD, Bitbucket, Git, Linux/Unix, Apache, Nginx
- **Automation & Security:** Python Automation Schedulers, MinIO Object Storage, FTP/SFTP Synchronization, AES & GPG Encryption, SSIS Migration
- **Tools & Other:** Azure Data Studio, Postman, AS400 (Core Banking Inquiry), IT Support & Hardware Diagnostics

EMPLOYMENT HISTORY

BRI (Under Vendor) | 13 OCT 2025 – Present

Back End Engineer

- Developed and maintained modular scheduler applications in Golang to automate mission-critical BRIVA banking workflows.
- Architected the centralized scheduler integration model where sch-log-activity-briva functions as a central logging and tracking hub for dependent schedulers (sch-param-ftp-briva, sch-data-update-briva, sch-generate-file-briva, sch-sp-executor-briva, sch-data-copy-briva).
- Built sch-parse-file-merah-putih in Go from scratch to replace 3 legacy SSIS DTSX packages (CreateDatabase, GetAndUnzip, Parse), utilizing Clean Architecture to preserve 100% of established business logic while transitioning to containerized processing and MinIO storage.
- Engineered a Python-based automation scheduler for encrypting and decrypting ATM settlement and client files using AES and GPG, featuring multi-threaded processing and robust retry logic to ensure file integrity.
- Integrated schedulers with SQL Server to execute data processing logic, bulk operations, and stored procedures.
- Developed centralized REST APIs using Fiber to monitor job execution statuses and operational metrics across scheduler instances.
- Automated file distribution pipelines integrating remote FTP/SFTP servers with MinIO object storage for secure parameter retention.
- Containerized services using Docker multi-stage builds and managed deployments to Kubernetes clusters via Helm charts with Bamboo CI/CD.
- Authored SQL Standard Operating Procedure (SOP) documentation with official memos (nota dinas) to ensure audit compliance and regulatory traceability.

Hitachi Channel Solution | 2024 – SEP 2025

Software Engineer

- Developed and maintained the web-based IMHOTS Application and EJ Dashboard for ATM fleet asset monitoring across multiple client partner banks using PHP (Laravel) and MySQL.
- Resolved bug tickets, implemented customer feature requests, and optimized application performance to ensure high system uptime.
- Accelerated database query performance by implementing strategic indexing and temporary tables for high-volume ATM transaction data.
- Developed automation miniscripts to parse and convert Excel data files into SQL format, streamlining database ingestion.
- Engineered bulk insert automation scripts reading file paths with auto-start service configurations on server reboot to maintain operational continuity.
- Managed client server environments, including Apache configuration, XAMPP, and SQL Server/MySQL dependencies.

OCBC NISP | 2022 – FEB 2024

Software Engineer

- Maintained and modernized the internal ProrRekonATM procedural desktop application for reconciling billing data between the company and biller partners.
- Re-architected and recoded ProrRekonATM into a responsive web application using React.js and Axios for API integration.
- Engineered backend REST APIs using Golang and PostgreSQL to handle reconciliation data processing cleanly outside procedural stored procedures.
- Validated data consistency through AS400 core banking queries and performed physical ATM testing to ensure end-to-end reconciliation accuracy.

KNusantara Group | APR 2023 – DEC 2023

Back-end & Analis

- Developed robust RESTful APIs using PHP (Laravel framework) integrated with MySQL database.
- Conducted technical requirement analysis and business process modeling prior to application module development.

BRI Life | 2020 – 2022

Back-end Developer

- Developed backend services using Node.js and Express framework, aligning API data payloads with insurance business workflows.
- Managed relational data models, queries, and schema updates using SQL Server and Azure Data Studio.

Bootcamp Code Academy | 2019

Software Engineer Trainee

- Completed intensive software engineering curriculum focusing on Java (Spring Boot) backend development and React.js frontend development.

IT Freelance | JAN 2019 – Present

Technical Support & IT Services

- Handled operating system installations, hardware troubleshooting, device repairs, and secondary device diagnostics.

EDUCATION

• Bachelor of Computer Science / Information Systems (S1 Sistem Informasi) | Universitas Mercu Buana (2018–2022) — GPA: 3.71 / 4.00 (Predikat: Cum Laude)

• Office Administration (Administrasi Perkantoran) | SMKN 42 Jakarta (2014–2017)

PERSONAL SKILL

Quick Learning & Rapid Technical Adaptability • Clear Written & Verbal Communication • Structured & Highly Organized • Independent Problem Solving & Team Collaboration • Strong Accountability & Production Ownership
